У некоторых малышей нет возможности получать молоко непосредственно из груди. Очень важно обеспечить кормление материнским молоком как для младенца, так и для его матери. Молокоотсос «Wee Baby» задействует материнскую грудь и обеспечивает более свободный отток молока. Дизайн включает в себя бутылочку для кормления грудным молоком в те моменты, когда мать непосредственно сама не может покормить ребенка.

EN

Some mothers can't breast feed directly. However it is very important for mother and child that milk is provided. Wee Baby Breast Pump stimulates the tissue of the breast and support the production of milk. When the mother can't do breast feeding she can nurse her milk with the bottle.

Reasons for using breast pumps:

- Pains in breasts and nipples.
- Inability of the child to grasp the breast,
- Milk blockage in the breast,
- Premature birth,
- Caesarean section,
- Illness of the baby,
- Working mothers, who have to go back to work after giving birth.

RU

Manche Mütter können nicht direkt stillen. Jedoch ist es für Mutter und Baby sehr wichtig mit Muttermilch versorgt zu sein. Die Wee Baby Brustpumpe stimuliert die Milchdrüsen und unterstützt die Milchproduktion. Wenn die Mutter das Kind nicht stillen kann, kann Muttermilch mit der Flasche gefüttert werden.

Gründe für die Verwendung von Brustpumpen:

- Schmerzende Brust und gereizte Brustwarzen,
- Unvermögen des Kindes die Brustwarzen zu fassen,
- Milchstau in der Brust,
- Bei Frühgeburten
- Bei Geburt durch Kaiserschnitt,
- Bei Krankheit des Kindes,
- Bei berufstätigen Müttern, die nach der Geburt wieder arbeiten müssen.

لا تحتاج الأمهات لبعض الرضع إرضاعة حليب الأم مباشرة . تقدم حليب
 الأم للطفل الرضيع على أي شيء إلا الطفل والطفل . أمهات ، مضخة الحليب
 من مربي يبي الرضع عن طريق حليب الأم وأسعدت على حليب الحليب بشكل أكثر
 راحة . تم تصميمه من زجاجة من أجل تغذية الرضع بحليب الأم في الأوقات
 التي ترضع الطفل . أمهات ، أسباب استخدام مضخة الصدر :
 • الصدر و حملات الثدي تعاني من التهييج ،
 • مشاكل إسماع الطفل للثدي ،
 • الاستعدادات في الصدر ،
 • الولادة المبكرة ،
 • ولادة العمليات القيصرية ،
 • عودة الطفل من المرض ،
 • عودا للتعلم بعد ولادة الطفل .

- Installed, cleaned and transported with ease.
 - Has been designed for one hand use.
 - Silicone shield perfectly adapts to all breast size and do not irritate.
 - Specially designed feeding bottle for stored milk is available.

The nursing part of mothers having caesarean delivery start later than then those who have normal delivery. Likewise, the nursing problems are more frequent when compared to women who have normal delivery. The nursing problems of caesarean delivery must be better supported. We can summarize these supports as follows:

- The first step in nursing support is to make the baby attached to the mother in the first half and 1 hour. This may require intensive effort as the lactation has not started yet. You should continue with determination and patience.
- The second important stage is the mother's morale which is in good mood. The mother should be in good mood. The mother should not be depressed and believe that the lactation will start and be sufficient for her baby.
- Finally, the content of the nutrition must be increased with juicy and plentiful food and water consumed.

* The pumps are used when all these operations are useless. High vacuum power of the pump may be also on advantage.

First of all, the baby is promoted to suck the breast. Milking the breast with a pump should be used as the second option if the baby is not able to suck.
